EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's representative Irina Vainberg on 7/1/04.

The application has been amended as follows:

Claim 3. A method for transducing hematopoietic stem cells with a vector particle containing a gene of interest, which method comprises contacting target hematopoietic stem cells with vector particles pseudotyped with feline endogenous virus RD114 envelope protein and containing a gene of interest, wherein the vector particles are substantially free of factors that induce hematopoietic stem cell differentiation by being free of producer cells and producer supernatant to the extent that the amount of these differentiation-inducing factors is too low to cause the hematopoietic stem cells to differentiate, proliferate, or die, and whereby the transduced hematopoietic stem cells are capable of expressing the gene of interest and repopulating cell lineages when transplanted into a host.

Claim 10. The method of claim 3 wherein the target hematopoietic stem cells are pre-stimulated.

Claim 11. The method of claim 10, wherein the target hematopoietic stem cells are stimulated by treatment with signaling molecules selected from the group consisting of cytokines, growth factors and phytohemagglutinin.

Art Unit: 1636

Claim 13. The method of claim [12] 3, wherein the target hematopoietic stem cells are obtained from the group selected from [the group consisting of] cord blood cells, mobilized peripheral blood cells, bone marrow cells, and liver.

Claim 15. The method according to claim 2, wherein upon engraftment of the transduced hematopoietic stem cells contacted one time with the retroviral particles into a host, greater than 10% of the transduced cells express the gene of interest.

Claims 12, 17-20 (cancelled)
